

Delta δ

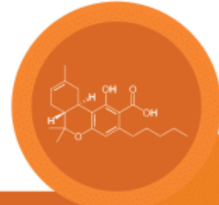

"The federally legal alternative to traditional THC"

@delta_8thc

LEARN ABOUT DELTA-8

Delta-8-THC is a powerful cannabinoid native to the cannabis flower. Though typically found in only very small amounts (compared to Delta-9-THC) it's a psychotropic, well-known cannabinoid relative.

While only a few atomic bonds are different from Delta-9-THC, Delta-8-THC offers a unique, potent high all it's own.

The 2018 Farm Bill specifically made all derivatives, isomers, and cannabinoids in hemp legal, provided the final product has less than 0.3% Delta-9-THC.

Delta-8-THC is an isomer of CBD, a derivative of hemp and CBD, a cannabinoid found in hemp, and is ultimately contained in our extracts with less than 0.3% Delta-9-THC.

The National Cancer Institute lists Delta-8 in its drug dictionary as:

An isomer of hemp with "antiemetic, anxiolytic, appetite-stimulating, analgesic, and neuroprotective properties."

ANXIOLYTIC
Drug that relieves anxiety.
NEUROPROTECTANT
Acts to salvage, recover, & regenerate the nervous system.

ANTIEMETIC
An anti-nausea drug.
APPETITE STIMULANT
Aids in increasing hunger.

ANALGESIC
Acts to relieve pain.

THE MORE YOU KNOW

"This agent exhibits a lower psychotropic potency than Delta-9-tetrahydrocannabinol (Delta-9-THC), the primary form of THC found in cannabis."
-The National Cancer Institute
